

# MSc Data Mining

## Topic 01 : Module Overview

---

### Part 02 : Pre-Start Lab - Feedback

**Dr Bernard Butler and Dr Kieran Murphy**

Department of Computing and Mathematics, SETU Waterford.  
(bernard.butler@setu.ie; kmurphy@wit.ie)

Spring Semester, 2023

#### Outline

- Question and student performance

# Question Performance

- ✓ Q1–Q5 were well answered — basic descriptive statistics.
- Q6 dealt with IQR and outliers — both less common statistical concepts.
- ✗ Q7 dealt with distribution shape.
- ✓ Q8 & Q9 were well answered — common statistical metrics.
- ✗ Q10–Q12 were based on percentage tip. Main mistakes here was not computing percentage tip, so for example Q11 most common wrong answer was 1.
- ✗ Q12 Main issue was filtering to match criteria.
- ✗ Q13 & Q14 asked for a probability, wrong answers suggest we need to cover core concepts. See additional notes.
- ✓ Q15–Q17 were based on grouping data, well answered for given level of difficulty.

# Student Performance

- ✓ Most attempted all questions — this is nearly always a good idea, even with negative marking.
- ✓ Average grade was 64%.
- ✓ Overall, the performance is good — you are not expected to know everything at this stage.
